

## INTCAS: **INT**elligent **C**ommunities **A**round **S**tudents

### Overview

INTCAS helps education institutions to attract, recruit, and manage qualified international students from around the world in a safe, compliant and cost-efficient manner. Our products and support services are carefully crafted, to ensure the relationship between the students and institutions is elevated and protected.

Having explored various academic course options within INTCAS, international students are able to use our Master Application Form to create and submit a single application to their chosen institutions. Upon receipt, education institutions can process that application in a safe and efficient manner by working with a host of internal and external stakeholders who are relevant to the application. The ultimate aim is to ensure better conversions from application to enrollment. Our Admission Cloud is a centralized admission platform which connects all authorized stakeholders (within INTCAS) to the application. As the status of the application evolves, each stakeholder remains abreast of the status and are provided a personalized list of reminders, actions, deadlines and associated risks.

Our Admission Cloud provides a much richer and efficient admission process, promoting transparency and trust. The enriched experience allows institutions to build intimate relationships with students, families and agents, while internal checks and balances are in place to ensure consistency and compliance. Admission data held securely within INTCAS can be seamlessly transferred at any stage into the institution's internal system, ensuring data integrity.

### Benefits of Admission Cloud

Provides an enriched student experience by allowing students, parents, agents and other external stakeholders like banks complete transparency at each stage of the admission process

Promote a culture of admission excellence, ensuring consistency in how education institutions recruit and manage international students

Access metrics to better understand areas of improvement along the admission process, to better serve international students

Transfer data from the Admission Cloud to your institution's internal admission system efficiently, seamlessly and securely to ensure data integrity

Gain insight to improve the allocation of admission staff, ensuring the correct level of resources to serve international students along the admission process
